8. LLM 建议

Improve the authority score by acquiring more backlinks from reputable sources and enhancing the site's credibility through testimonials or case studies.

Optimize the site structure by reducing the number of H3 tags (currently 16) and ensuring a more hierarchical and logical heading structure.

Increase the text ratio (currently 1.76%) by adding more relevant, high-quality content to improve readability and keyword targeting.

Implement structured data (schema markup) to enhance search engine understanding and potentially improve rich snippet appearances.

Ensure all security headers (like HSTS and CSP) are properly configured to improve site security and trustworthiness.
